**SUBJECT      Response to CRWQCB-LAR Directive Letter**  
Former ExxonMobil Jalk Fee Property  
10607 Norwalk Boulevard  
Santa Fe Springs, California  
CRWQCB-LAR Case No. 0203; Site I.D. No. 1848000

Dr. Chang:

At the request of ExxonMobil Environmental Services (EMES), on behalf of ExxonMobil Production Company (ExxonMobil), Environmental Resolutions, Inc. (ERI) has prepared this response to the California Regional Water Quality Control Board – Los Angeles Region's (CRWQCB-LAR's) directive dated March 30, 2010, which required submission of a work plan to further investigate the lateral and vertical extent of dissolved phase halogenated volatile organic compounds (HVOCs) at the above-referenced site (Plate 1 and Appendix A).

After extensive file reviews and data evaluation of both the former ExxonMobil Jalk Fee property and the Continental Heat Treating (CHT) facility, data shows that the source of the HVOCs in soil along the southeastern property boundary is from the CHT facility, that HVOCs in groundwater are sourced from both the CHT facility and the regional Omega Chemical Superfund area, and that corrective action regarding the residual HVOCs detected on both the former Jalk Fee property and CHT facility should be directed to the responsible party of the CHT facility. It is evident that the use of a former degreaser and storage of hazardous materials at the CHT facility have resulted in release of chlorinated solvents which has migrated onto the former Jalk Fee property. ERI respectfully requests that the March 30, 2010

directive from the CRWQCB-LAR for additional assessment be rescinded, as evidence indicates that ExxonMobil is not responsible for the HVOCs detected along the southeastern property boundary.

## **SITE DESCRIPTION**

Former ExxonMobil Jalk Fee is located at 10607 Norwalk Boulevard, in the city of Santa Fe Springs, California. The site is 8.8 acres in size and has contained multiple industrial businesses since redevelopment into an industrial park in 2003. The surrounding areas consist mainly of industrial facilities. The CHT facility, located contiguous to the south of the site, has an active environmental case with the CRWQCB-LAR for the release of chlorinated solvents tetrachloroethene (PCE) and trichloroethene (TCE) associated with the use of a degreaser at the facility (Plate 2) (Arcadis, 2009).

Both the former Jalk Fee property and the CHT facility are located within the Omega Chemical Superfund Site, an area more than four miles long, with documented regional chlorinated solvent concentrations in groundwater relating to historical industrial activities in the cities of Santa Fe Springs and Whittier. The contaminants of concern relating to the Omega Chemical Superfund Site are VOCs, including chlorinated solvents such as PCE and TCE (USEPA, 2009).

## **BACKGROUND**

### **Jalk Fee**

The site contained oil production facilities from the 1920s to the 1990s, and the oil field facilities were removed in the 1990s. The documented contaminants of concern at the site related to the oil field operations are hydrocarbons and metals. ExxonMobil has not identified records that show it used solvents at the Jalk Fee property (Arcadis, 2009). As acknowledged in the CRWQCB-LAR's letter dated June 23, 2010 to CHT, "the adjacent Jalk Fee property was used for oil production operations and no primary sources(s) of PCE contamination have been identified" (CRWQCB-LAR, 2010).

In 1997, Alton Geoscience completed site assessment activities to delineate the distribution of previously identified HVOC- and hydrocarbon-containing soil in the vicinity of the southeastern property boundary and eastern central portion of the site. At the completion of the assessment work, a fate and transport model was completed, which indicated that the concentrations of the residual hydrocarbons left in place posed no risk to groundwater (Alton, 1997). In June 1998, Alton Geoscience completed remedial excavation activities of HVOC- and hydrocarbon-containing soil in three areas along the southern property boundary and eastern central portion of the site (Plate 2) (Alton, 1998). Based on the results of

the soil remediation activities and the fate and transport model, the CRWQCB-LAR issued a closure letter for soil on March 1, 1999. (CRWQCB-LAR, 1999).

In November 2000, TRC Alton Geoscience (TRC) completed additional remedial excavation activities in seven areas throughout the former Jalk Fee property, to remove hydrocarbon-containing soil as directed by the Santa Fe Springs Fire Department (SFSFD) to facilitate planned redevelopment of the site (Plate 2). Confirmation soil samples collected from the post-excavation areas indicated that cleanup goals set by the SFSFD had been achieved. An exposure assessment was also completed, which indicated that no additional mitigation was warranted to protect human health prior to initiating site development activities (TRC, 2000). The SFSFD and the CRWQCB-LAR issued no further action letters for soil in directives dated December 26, 2000 and March 5, 2001, respectively, which stated “we have determined that the chlorinated and petroleum hydrocarbons contaminated soils have been remediated to levels satisfactory to this Regional Board and protective of groundwater” (SFSFD, 2000; and CRWQCB-LAR, 2001).

In 2003, the property was paved and redeveloped as an industrial business park.

Based upon the presence of HVOCs in groundwater, the CRWQCB-LAR required continued groundwater monitoring at the site, which has occurred for the past nine years, utilizing wells MMW-4 and MMW-5. Well MMW-3 was destroyed in 2001 to facilitate redevelopment of the property. The results of the monitoring have indicated no detections of BTEX or hydrocarbons for the two wells for the past seven sampling events, and several requests for no further action have been submitted on behalf of ExxonMobil (Plate 2 and Appendix B) (Arcadis, 2009).

### **Continental Heat Treating**

The CHT facility was designed in 1968 and began operation in 1969. According to the Department of Toxic Substances Control (DTSC), the CHT facility processes metal parts with heat to perform carbon nitriding on the surface of the metal (DTSC, 2010). This process involves the use of solvents, including PCE and TCE. Hazardous materials registration forms from 1993 reported that 1.5 tons of PCE waste were generated each year at the facility (McLaren/Hart, 1993).

In 1986, a 6,000-gallon diesel UST was removed from the CHT facility. Soil samples collected beneath the UST did not indicate any concentrations of hydrocarbons (Plate 2) (Hydro-Fluent, Inc., 1986).

In 1995, a soil assessment was conducted in the vicinity of the former degreaser in response to a Notice of Violation (NOV) issued by the Los Angeles County Fire Department (LACFD) during a routine

complaint inspection. Boring B1 was advanced to a total depth of 10 feet bgs, and soil samples were collected and submitted for laboratory analysis. Results of the assessment indicated a release of PCE and TCE to the subsurface (GEI, 1995).

Following the 1995 soil assessment, several other soil and soil vapor assessments were conducted at the site. In 2004, a vapor extraction system began operation at the CHT facility, utilizing well B1/VEW to treat residual HVOCs in the vicinity of the former degreaser (Fero, 2003). However, after approximately four months of operation, the system was shut down due to the inability to effectively remove HVOCs (Fero, 2004).

## REVIEW OF HISTORICAL DOCUMENTS

ERI reviewed records for both the former Jalk Fee property and the CHT facility to determine the most likely source of the chlorinated solvent concentrations detected in soil and groundwater in the vicinity of the southeastern property boundary. File reviews were conducted with the SFSFD and the CRWQCB-LAR. Additionally, an environmental report was obtained from Environmental Data Resources, Inc. (EDR) and historical documents relating to previous assessments and remedial activities performed on site were obtained from ExxonMobil (Appendix C).

## Findings

According to the *Limited Subsurface Investigation* report prepared by McLaren/Hart on November 15, 1994, the northeast portion of the former Jalk Fee property may have once been leased to a company that used solvents. Through discussions with Mobil personnel, it was determined that the southern boundary of the leased property was 70 feet north of the identified PCE- and TCE-containing soil along the southeastern property boundary. A McLaren/Hart *Closure Report for Petroleum Hydrocarbon Issues at Mobil Jalk Fee Property* dated September 20, 1996, detailed assessment activities conducted in this area. The investigation did not find any evidence that a release of chlorinated solvents had occurred in the northeastern portion of the property, and recommended that no further remedial investigation be performed in this area, therefore this historical use of the property does not appear to be a source of the residual HVOCs detected in the southeastern portion of the property (Plates 3 through 6) (McLaren/Hart, 1994; and McLaren/Hart, 1996).

With the exception of the above-mentioned company, ERI was not able to find any evidence of chlorinated solvent use on the former Jalk Fee property. ERI's findings indicate that the site was used from the 1920s to the 1990s for oil production facilities, which have no association with the use of chlorinated solvents.

In a letter by McLaren/Hart dated September 23, 1993, the findings of a previous investigation into the source of the chlorinated solvents detected on the former Jalk Fee property were summarized. The letter stated that the CHT facility, located contiguous to the south of the former Jalk Fee property, was the most likely source of PCE and TCE concentrations detected in soil at the former Jalk Fee property. According to the letter, "the use of large quantities of PCE on the adjoining site, the location of the PCE in soil relative to the degreaser and pipe trench on the Continental facility, and the complete absence of any use of chlorinated solvents of any kind by Mobil E&P, very strongly points to Continental Heat Treating as the source of the PCE on the Jalk Fee" (Appendix D).

The McLaren/Hart letter referred to a facility drawing for the CHT facility dated August 20, 1968, which identifies a degreaser within the facility, as well as a pipe trench extending north from the degreaser to the exterior of the building. It is unclear whether the pipe was used to transport PCE or functioned as utility for the facility, however, based upon the location of the pipe trench and the typical permeable nature of the backfill material used for trenches, it could have acted as a preferential conduit to transport PCE from the area of the former degreaser to the northwestern portion of the CHT facility and onto the former Jalk Fee property. An (incomplete) scanned copy of the facility drawing is provided in Appendix E.

Multiple Inspection Reports/Notice of Violations (NOVs) dating from 1984 to 2008 were on file with the SFSFD for the CHT facility. Of significance was an NOV dated March 16, 1986, which directed the removal of "oil from ground in rear storage area." Another NOV dated May 19, 1989, additionally directed CHT to "remove and legally dispose of oily surface in rear asphalted yard." This NOV also cited CHT for improper labeling of PCE containers and directed CHT to "keep lids and bung on" and "don't overfill" (Appendix F).

The LACFD prepared a Case Synopsis dated October 19, 1995, that summarized the assessment activities performed to date at the CHT facility. The Case Synopsis stated that during an inspection of the facility, an inspector determined that the location of the former degreaser "was close enough to the northern property line that leaks, sloppy operations or spills could have migrated offsite despite employee's statements to the contrary" (LACFD, 1995). The inspector issued an NOV, which led to a limited soil assessment in the vicinity of the former degreaser, the results of which indicated a release of PCE and TCE to the subsurface (GEI, 1995).

## **SITE CONCEPTUAL MODEL**

### **Area of Adsorbed Phase HVOCs**

Adsorbed phase HVOC concentrations on the former Jalk Fee property are generally localized to the vicinity of the southeastern property boundary, 80 feet west-northwest of the northwest corner of the CHT building. Remedial excavations conducted in 1998 and 2000 removed PCE- and TCE-containing soil in this area to depths ranging from 6 feet to 15 feet bgs. The maximum PCE concentration was reported in confirmation sample S10, collected at a depth of 7 feet bgs, with a concentration of 2,000 mg/kg (Plate 3) (Alton, 1998; and TRC, 2000).

The lateral extent of chlorinated solvents has been adequately defined in all directions on the former Jalk Fee property. Concentrations of HVOCs are highest within the top 15 feet of soil, and decrease with depth. The lateral distribution of HVOCs is generally confined to the area along the southeastern property boundary adjacent to the CHT facility, surrounding boring GP-39. The erratic distribution and low concentration of chlorinated solvents detected in outlying borings away from the CHT facility likely result from vapor phase and soil moisture dissolved phase solvents migrating away from the source area through the heterogeneous soil column (Plates 3 through 6).

Residual adsorbed phase HVOC concentrations have been reported on the CHT facility in the vicinity of the degreaser as well as in the vicinity of the northeastern property boundary. However, with the exception of one soil vapor probe (SG-6), no assessment activities have been conducted on the CHT facility immediately south of the area where the highest PCE concentrations have been reported on the former Jalk Fee property, or in the area of the former pipe trench (Plate 2) (EST, 1997). In the interval from 46 to 61 feet bgs, the maximum PCE concentration in soil for both sites has been measured on the CHT facility in boring B1, which was advanced in the location of the former degreaser. This is consistent with the typical distribution pattern around a source area, where the hydrocarbons migrate vertically below the release and laterally away from the release, and concentrations decrease with distance (Plate 6).

Although this data gap exists, the distribution of residual HVOCs on the former Jalk Fee property indicates one or more releases of solvents to the surface near the northwestern corner of the CHT facility, which spread approximately 45 feet laterally onto the former Jalk Fee property and migrated vertically through the subsurface until reaching groundwater (Plates 3 through 6). It is recommended that additional soil assessment be performed in the north-central portion of the CHT facility to address this data gap and more accurately define the release and source area.

### **Area of Dissolved Phase HVOCs**

Groundwater monitoring was first implemented at the site in 2000. NAPL has never been measured in any of the wells at the site. The maximum PCE and TCE concentrations have historically been reported in well MMW-5, located near the southeastern property boundary and closest to the CHT facility. The maximum historical PCE and TCE concentrations in this well have been 660 ug/L and 190 ug/L, respectively. Results of historical groundwater measurements indicated that the groundwater flow direction was to the south-southwest. Groundwater monitoring is performed at the site on an annual basis, during the fourth quarter (Appendix B) (Arcadis, 2009).

Although groundwater samples have never been collected on the CHT facility, the CRWQCB-LAR letter dated June 23, 2010 states that "CHT has been identified as a responsible party in the US Environmental Protection Agency's Omega Chemical groundwater plume investigation and cleanup," and directs CHT to implement a groundwater monitoring program.

### **CONCLUSIONS**

The site is located within the regional Omega Chemical Superfund Site, which is known to regionally contain groundwater with PCE and TCE.

The results of file reviews of historical use of the former Jalk Fee property revealed no evidence that ExxonMobil used chlorinated solvents on the property. Furthermore, data shows that operations by a former lessee in the northeast portion of the Jalk Fee property did not result in a release of solvents on the property. CHT, on the other hand, has documented storage and use of PCE in a degreaser from 1969 to present day, and several documented releases of PCE.

Although there are several data gaps in the assessment on the CHT facility, the distribution of PCE in soil indicates that PCE was likely released from the CHT facility's former degreaser and migrated to the west via the former piping trench, where it was released into the soil in the north central and western portions of the CHT property and the adjacent southeastern portion of the former ExxonMobil property, as the highest concentrations measured on the former Jalk Fee property were from 0 to 15 feet bgs along the property boundary with the CHT facility, and decrease with depth.

Based upon the absence of a source of release on the former Jalk Fee property, the presence of the regionally extensive Omega Chemical Superfund area, and the documented use and release of PCE to soil on the CHT facility, ERI respectfully requests that the CRWQCB-LAR identify CHT as the responsible party for the PCE in soil on the former Jalk Fee property, identify CHT and Omega Chemical Superfund

Site as joint responsible parties for the PCE in groundwater on the former Jalk Fee property, direct CHT to comply with previous requirements to conduct additional soil, soil vapor and groundwater assessment on its property, and rescind the March 30, 2010 directive requiring ExxonMobil to conduct additional groundwater assessment.

## **LIMITATIONS**

This report was prepared in accordance with generally accepted standards of environmental, geological and engineering practices in California at the time of investigation. No soil engineering or geotechnical references are implied or should be inferred. The evaluation of the geologic conditions at the site for this investigation is made from a limited number of data points. Subsurface conditions may vary away from these data points.

For any questions concerning this response, please contact Mr. James Anderson at (805) 644-4157, extension 181805.

### **RESPONSE TO REQUEST FOR GROUNDWATER CLOSURE – EXXONMOBIL FORMER JALK FEE PROPERTY, 10607 NORWALK BOULEVARD, SANTA FE SPRINGS, CALIFORNIA (SCP NO. 0203, SITE ID NO. 1848000)**

Dear Mr. Vidyasagar:

Los Angeles Regional Water Quality Control Board (Regional Board) staff have received and reviewed the *2009 Annual Groundwater Monitoring Report and Closure Request* (Report), dated October 27, 2009, prepared by Arcadis for the reference site. In addition, Regional Board staff held a meeting with representatives of ExxonMobil Environmental Services Company (ExxonMobil) and Environmental Resolutions (new consultant) on March 16, 2010, to discuss groundwater closure related issues.

The site is approximately 8.8 acres in size and redeveloped into an industrial park in 2003, following soil remediation activities. The site had been used for oil production activities from the 1920s to the 1990s. The abandonment and removal of oil wells, pipelines, and a tank farm were conducted in 2000. Historical site assessment activities indicated that soil was impacted with petroleum hydrocarbons and halogenated volatile organic compounds (HVOCs). Following remedial excavation of petroleum hydrocarbons and chlorinated solvent contaminated soils to depths up to 24 feet below ground surface (bgs), the site was granted soil closure by the Regional Board in the letters dated March 1, 1999 and March 5, 2001, to promote the site redevelopment.

Three groundwater monitoring wells (MMW-3, MMW-4, and MMW-5) were installed at the site in 1994 as part of requirements for on-site land treatment of petroleum hydrocarbons impacted soil. Monitoring well MMW-3 was abandoned in 2001. The primary contaminants of concern in groundwater beneath the site are HVOCs, including tetrachloroethylene (PCE) and trichloroethylene (TCE). During the last 9 years of groundwater monitoring, PCE and TCE were detected at concentrations up to 660 micrograms per liter (µg/L) and 190 µg/L, respectively, in monitoring well MMW-5. Monitoring well MMW-5 is located crossgradient from and adjacent to the identified on-site soil contamination area. Based on the evaluation of 9 years of post soil closure groundwater monitoring data, Arcadis, on behalf of ExxonMobil, requested groundwater closure for the subject site.

Based on our review of the Report and file documents, Regional Board staff have determined that groundwater closure at the site can not be granted at this time for the following reasons:

**California Environmental Protection Agency**

Recycled Paper

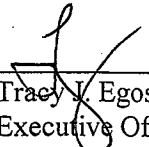

*Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.*

March 30, 2010

1. Based on the results of historical soil assessment, HVOCs were detected at concentrations up to 42,000 micrograms per kilogram ( $\mu\text{g/kg}$ ) in soil borings at depths ranging from 5 to 35 feet bgs across the southern portion of the site. Detectable HVOCs concentrations throughout the sampled soil columns suggest on-site releases of HVOCs to groundwater beneath the site.
2. Previous remedial excavation activities were conducted to remove HVOCs impacted soil to a depth of approximately 15 feet bgs only. Residual HVOCs contamination in soil remains at concentrations up to 1,400  $\mu\text{g/kg}$  between 15 feet and 35 feet bgs. The residual HVOCs may act as a continuing source of groundwater contamination beneath the site and vicinity.
3. There are no groundwater monitoring wells, upgradient, crossgradient to the east and southeast, and downgradient, from the identified on-site area of soil contamination, located at the southern portion of the site. Existing monitoring wells MMW-4 and MMW-5 are not adequate to monitor the magnitude and configuration of the HVOCs plume in groundwater originating/contributing from the on-site source area.
4. To adequately delineate the lateral and vertical extent of groundwater contamination from releases at the site, please submit a work plan for further groundwater investigation to the Regional Board by **July 1, 2010**. Additional monitoring wells shall be screened at multiple depths and installed at the identified source areas and in the upgradient, crossgradient, and downgradient directions.
5. Pursuant to Division 7 of the Porter Cologne Water Quality Control Act under section 13307.1, the Regional Board is required to notify all current fee title holders for the subject site prior to considering corrective action or granting case closure. Therefore, you are required to provide the name, mailing address and telephone number for all record fee title holders for the site together with a copy of the county record of current ownership, available from the County Recorder's Office, or you may complete the attached Certification Declaration Form and submit it to the Regional Board by **July 1, 2010**.

**If you have any questions, please contact Dr. Ann Chang at (213) 620-6070 or [achang@waterboards.ca.gov](mailto:achang@waterboards.ca.gov).**

Sincerely,

  
Tracy J. Egoscue

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## EXECUTIVE SUMMARY

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/31/2010 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

#### ***Federal CERCLIS list***

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 01/29/2010 has revealed that there are 3 CERCLIS sites within approximately 0.5 miles of the target property.

#### ***Federal CERCLIS NFRAP site List***

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2010 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

### ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/17/2010 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 05/11/2010 has revealed that there are 14 ENVIROSTOR sites within approximately 1 mile of the target property.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 02/17/2010 has revealed that there are 4 RCRA-NonGen sites within approximately 0.25 miles of the target property.

Completed Document Type: Site Screening  
Completed Date: 1993-10-28 00:00:00  
Comments: The Department received a notification from PRP alleged that the site's soil contamination originated from an off-site source, Continental Heat Treating, Inc.. Soil at the site is contaminated with crude oil; heavy metals such as lead, mercury, and zinc; and chlorinated hydrocarbons such as PCE, TCE, and 1,2-DCE. Sample results indicate that the concentration of these contaminants exceeding regulatory limits. Due to the evidence of contamination onsite, the Department recommends a PEA.

EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

**Hazardous Waste Summary:**

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D028

Waste name: 1,2-DICHLOROETHANE

**Summary Details:**

Conditions at Proposal September 29, 1998): The Omega Chemical Corporation Omega) site is a former hazardous waste treatment and storage facility that operated from 1976 to 1991 on a 40,000-square foot property in Whittier, Los Angeles County, California. Omega conducted solvent recovery using an on-site fractionation and distillation process and operated as a storage and transfer facility for various hazardous waste classifications. Hazardous wastes stored on site contained mainly chlorinated and aromatic solvents. In June 1995, before removal activities, the Omega site consisted of thousands of drums of hazardous waste, two roll-off bins of hardened resin material, hundreds of empty but contaminated drums, numerous cylinders with capacities ranging from 15 to 20,000 pounds, and various other smaller containers of waste and/or hazardous waste. Inside the on-site warehouse there were hundreds more 55-gallon drums that Omega claimed to be product and assorted smaller containers of hazardous material. Since 1991, the California Department of Toxic Substances Control (DTSC) and EPA's Hazardous Waste Management Division have been actively trying to get the owner/operator to remove the wastes and clean up the site. In March 1995, the site owner/operator plead guilty to two felony counts of illegal storage and disposal of hazardous wastes. On May 9, 1995, EPA issued CERCLA Administrative Order No. 95-15 to the owner of Omega and to generators of hazardous waste that had shipped major quantities of material to Omega. During 1995, EPA's Superfund Emergency Response Office oversaw Phase I removal activities, during which contractors to a responsible party group removed all hazardous materials and wastes from the site. Phase II site activities began in November 1995 and included collection and analyses of subsurface soil and ground water at the site. Analytical results indicated that subsurface soil samples were mainly contaminated with tetrachloroethene (PCE), with lesser amounts of trichloroethene, dichloroethene and other chlorinated hydrocarbons, Freons and metals. PCE contamination was detected in soil at concentrations ranging from 1.9 milligrams per kilogram (mg/kg) to 510 mg/kg. Ground water samples collected at the site contained PCE up to 86,000 micrograms per liter as well as significant concentrations of other chlorinated hydrocarbons and Freons. Phase II activities documented the presence of PCE in shallow ground water in a plume that extends almost 1 mile downgradient of the site. Although the ground water samples were collected in the shallow regional aquifer of the Lakewood Formation and most of the municipal drinking water wells draw water from the San Pedro Formation, California Department of Water

Resources hydrogeologic cross-sections of the Lakewood and Upper San Pedro Formations indicate that aquifers are interconnected within 2 miles of the site. Eight water purveyors draw ground water from 35 wells within 4 miles of the site to supply drinking water to approximately 284,270 people. The nearest well to the site is 1.3 miles to the west. This and nearly two-thirds of the wells within 4 miles draw water from the Lakewood and Upper San Pedro formation aquifers. The San Gabriel River is the nearest surface water body at approximately 2.5 miles from the site. The site is located in a mixed industrial and residential community, with residences located across Whittier Boulevard to the northeast. Status January 1999): EPA is considering various alternatives for the site. The description of the site release) is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.

Site Description: The Omega Chemical Corporation Superfund Site (Omega Site) is located in Whittier, California. EPA has divided the Omega Site into three Operable Units (OUs). OU-1 includes soil and groundwater contamination on and near the former Omega facility property, extending approximately 100 feet southwest of Putnam Street. OU-2 is the contamination in groundwater that originated from the former Omega facility and is downgradient of OU-1. OU-3 includes the indoor air contamination that has been documented within OU-1. The former Omega Chemical Corporation (Omega) property is located at 12504/12512 East Whittier Boulevard in Whittier, California. It occupies Los Angeles County Assessor Tract Number 13486, Lots 3 and 4. The former Omega property is approximately 41,000 square feet in area and contains two structures, a warehouse and an office building. A loading dock is attached to the rear of the warehouse. The exterior areas are concrete paved, and the former Omega property is secured with a perimeter fence and locking gate. The identification number for the Omega Site in the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) is CAD042245001. Omega was a solvent and refrigerant recycling operation located in Whittier, California, a community of approximately 85,000 people. The former Omega facility was located at 12504 and 12512 Whittier Boulevard (two adjoining parcels), across the street from a residential neighborhood and within 1 mile of several schools, including three elementary schools and two high schools. The facility operated as a solvent and refrigerant recycling and treatment facility from approximately 1976 to 1991, handling primarily chlorinated hydrocarbons and chlorofluorocarbons. Drums and bulk loads of waste solvents and chemicals from various industrial activities were processed at Omega to form commercial products. Chemical, thermal, and physical treatment processes were reportedly used to recycle the waste materials. Wastes generated from treatment and recycling activities included still bottoms resulting from the distillation of spent solvents, aqueous fractions, and nonrecoverable solvents. EPA is the lead agency for the Omega Site. The California Department of Toxic Substances Control (DTSC) is the lead state agency. Currently, the expected source of cleanup monies for the Omega Site OU-1 vadose zone soils remedy is the group of potentially responsible parties that sent waste to Omega during its period of operation. Two separate parcels and street addresses comprise the property of the former Omega facility (i.e., 12504 and 12512 Whittier Boulevard). From 1951 to 1963, Sierra Bullets, Inc. and various related entities that manufactured bullets owned the 12504 Whittier Boulevard property. Before construction of the buildings in 1955, this property was used for agriculture. Fred R. Rippy, Inc. purchased the parcel at 12504 Whittier Boulevard in 1963 and sold it to Omega in 1987. From 1963 to 1966, Rippy operated a machine shop and then leased the facility to the following tenants, in chronological order: -Accessory Products Company (dry good warehousing) (1966 to 1967) -Maples Bros. Inc. (wood furniture manufacturer) (1967 to 1970) -Stoner Western Company (ambulance manufacturer) (1970 to 1974) -Bachelor Chemical Company (chemical recycler) (1974 to 1976) -Omega Chemical Corporation (1976 to 1987) From 1976 to 1987, Omega leased 12504 Whittier Boulevard for operation of a recycling and treatment facility for commercial and industrial solid and liquid wastes, and a transfer station for storage and consolidation of wastes for shipment to other treatment and/or

disposal facilities. In 1987, Omega purchased the property it was leasing at 12504 Whittier Boulevard and expanded operations onto the 12512 Whittier Boulevard property. The parcel at 12512 Whittier Boulevard was used for agriculture up until 1951, when the property was first sold for development. Between 1951 and 1984, the property was purchased and sold several times. It is not known how the property was used during this period. In 1984, the property was purchased by Fred R. Rippey, Inc., who sold it to Omega in 1987. During the period from 1984 to 1987, tenants at the property were Earthly Endeavors, which made handcrafted clay products, and the ANB Construction Company. Omega ceased operating in 1991, but its president, Dennis O'Meara, continued to operate at the two parcels under a different company name until 1995 on a more limited basis. Subsequent to 1991, the new company primarily accepted Freons. O'Meara owned both parcels until they were foreclosed upon in 2003. Between 1995 and 2003, the two properties were occupied by various tenants. The Omega Site was placed on the National Priorities List (NPL) in January. Van Owen Holdings LLC (Van Owen) of Los Angeles, California, purchased the former Omega property (12504 and 12512 Whittier Boulevard) in 2003. Currently, Star City Auto Body occupies the warehouse (12504 Whittier Boulevard) and performs auto body repair and painting. Star City also leases the small paved parking lot north of the warehouse building for automobile parking. Three Kings Construction occupied the former administrative building (12512 Whittier Boulevard) and larger paved parking area south of the warehouse from 2004 until 2006. Between 1984 and 1988, Omega received many notices of violations from the Los Angeles County Department of Health. In the early 1990s, DTSC and EPA actively pursued the owner/operator of Omega to remove drums of contaminants and to clean up the former Omega property. On August 27, 1993, at the request of DTSC, EPA conducted an assessment of the Omega facility to evaluate the condition of approximately 3,000 drums of unprocessed hazardous waste, which occupied most of the available storage space on the property. The drums were situated on pallets; in some locations, the drums were stacked three high; many were weathered from years of outside storage. EPA concluded from the 1993 assessment that the Omega facility represented a significant waste management problem. However, the State of California remained the lead agency for the former Omega property at that time. In January 1995, DTSC again requested EPA assistance in re-evaluating the condition of the facility. A preliminary assessment was conducted on January 19, 1995, and the following conditions were observed at the facility: -Approximately 3,000 drums were observed stacked three high, some without pallets between them. -A large majority of the drums appeared to be extremely corroded. -Numerous drums were observed leaking onto other drums and onto a concrete pad. -Numerous spills were observed leading away from the drums to other parts of the property. On May 9, 1995, EPA issued a Unilateral Administrative Order (UAO) to the owner of Omega and to the generators of the hazardous substances that had shipped 10 or more tons of hazardous substances to the former Omega property. During 1995 and 1996, a group of potentially responsible parties (PRPs) later known as the Omega Chemical Site PRP Organized Group (OPOG) with EPA oversight removed approximately 3,000 drums from the former Omega property and collected subsurface soil and groundwater samples. Numerous enforcement and response actions have been taken at the Omega Site by various regulatory agencies and PRPs. A summary of these actions follows: 1984 to 1991. Omega received numerous Notices of Violations (NOVs) from the Los Angeles County Department of Health. These violations were issued for the improper labeling of drums, leaking drums, incomplete hazardous waste manifests, and numerous safety violations. November 1990. A preliminary injunction was filed by the Los Angeles County Superior Court enjoining Omega from accepting any offsite hazardous waste. February 1991. The offices of the San Bernardino and Los Angeles County District Attorneys issued warrants to search three railcars on

the former Omega property. The search revealed illegal storage and transport of 700 hazardous waste drums and falsified manifests and drum labels. April 1991. The Los Angeles County Superior Court ordered Omega to cease operations, remove all hazardous wastes, and close the facility. October 1991. EPA entered into an Administrative Order on Consent, requiring Omega to perform several interim measures to mitigate current or potential threats to human health or the environment (e.g., improve facility security, repack leaking drums, and immediately remove them to an appropriate Class I facility) and to submit a Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI). August 1993. DTSC requested assistance from EPA to conduct a site assessment of the Omega facility. EPA tasked the Technical Assistance Team (TAT) contractor to conduct a site assessment, at which time TAT observed approximately 2,900 drums of hazardous wastes that entirely filled all available storage space at the facility. The drums were situated on pallets, sometimes three high and stacked in rows across the facility. Many of the drums were weathered from years of outside storage; however, only a few of the drums inspected displayed any signs of gross deterioration or were leaking. The conclusion reached from this 1993 TAT assessment was that Omega Site represented a significant waste management problem. The State of California remained lead agency for the Omega Site at that time. January 1995. The Los Angeles County Superior Court found Dermis O'Meara, president of Omega, in contempt of court for failing to follow its orders. The court ordered Mr. O'Meara and Omega to cease all operations at the former Omega property and to cooperate fully in all efforts to investigate and implement appropriate action at the former Omega property. March 1995. Dennis O'Meara pled guilty to two felony counts of illegal storage and disposal of hazardous waste. May 1995. EPA issued a UAO to the facility operators (Omega and Dermis O'Meara) and to the generators of hazardous substances who each sent at least 10 tons of hazardous substances to Omega. This UAO required the Respondents to remove approximately 2,700 drums at the former Omega property and to dispose, stabilize, or treat grossly contaminated concrete, asphalt, and/or soils found at or near the surface and to conduct surface and subsurface soil sampling and groundwater sampling to determine the nature and extent of contamination. February 2001. EPA and OPOG entered into a Partial Consent Decree (Partial CD) to address soil and groundwater contamination on the former Omega property and the area immediately downgradient. The Partial CD includes the following tasks: (1) design and implement a groundwater containment and mass treatment system for the Phase Ia (OU-1) Area (including conducting a groundwater Engineering Evaluation/Cost Analysis [EE/CA] to evaluate the nature and extent of groundwater contamination in the OU-1 area); (2) implement a vadose zone soil Remedial Investigation/Feasibility Study (RI/FS) for contaminant releases on or emanating from the former Omega property; and (3) install three sentinel groundwater monitoring wells and conduct quarterly sampling for one year. May 2004 to September 2005. EPA and OPOG conducted indoor air sampling within two buildings on the former Omega property and three others nearby, including a roller skating rink (Skateland) located next door to Omega. The purpose of the sampling was to determine whether contaminants in soil gas (i.e., soil vapor) on the former Omega property had migrated into buildings overlying the area of soil contamination. The results indicated varying degrees of vapor intrusion into each building at OU-1, and the highest levels of indoor air contamination were found within the Skateland building. In December 2004, air purifiers were installed in the Skateland building to reduce concentrations of volatile organic compounds (VOCs) in indoor air. OPOG also sealed cracks in the floor that might have been acting as points of entry for vapors migrating into the building. July 2004. EPA issued a UAO to 19 PRPs to install and sample additional OU-2 groundwater monitoring wells. The wells have been installed and are being used in determining the nature and extent of

OU-2 contamination. September 2005. OPOG conducted sub-slab depressurization (SSD) field testing to evaluate the potential effectiveness of a full-scale treatment system at Skateland. The results indicated that SSD would be effective in reducing indoor air VOC concentrations. September 2005. Following completion of the EE/CA, EPA issued an Action Memorandum to construct and operate an interim groundwater pump and treatment system for the OU-1 area. The objective of this interim groundwater action is to contain the highest levels of groundwater contamination until a permanent remedy is selected. April 2006. EPA issued an Action Memorandum to reduce levels of indoor air contaminants at the Skateland facility. OPOG's obligation to implement this removal action was memorialized in an amendment to the Partial CD. In September 2006, OPOG purchased the Skateland property and in April 2007 demolished the building, eliminating the need for the indoor air cleanup action. Operable Unit 1: The OU-1 portion of the Omega Site is located in a commercial/industrial area in Whittier, California. From 1976 to 1991, Omega operated a recycling and treatment facility for commercial and industrial solid and liquid wastes and a transfer station for storage and consolidation of wastes for shipment to other treatment and/or disposal facilities. In 2003, Van Owen Holdings LLC of Los Angeles, California purchased the property. Currently, two buildings (an office building and a warehouse) are located at the relatively flat former Omega property, with concrete paving covering exterior areas. Star City Auto Body occupies the warehouse (12504 Whittier Boulevard) and performs auto body repair and painting on the premises. The auto body shop also leases the small paved parking lot north of the warehouse building for automobile parking. The former Omega administration building (12512 Whittier Boulevard) and larger paved parking area south of the warehouse have had a variety of tenants since 2003. The former administration building is currently unoccupied, and the parking lot is used for temporary storage of wooden pallets by L&M Pallets on a month-to-month lease basis. One commercial property (formerly Skateland) and two industrial properties (Medlin & Son and Terra Pave) are immediately adjacent to the former Omega property (southeastern, northwestern, and southwestern boundaries, respectively). The northeastern boundary of the former Omega property is bordered by Whittier Boulevard and a frontage road. The former Skateland facility, located at 12520 Whittier Boulevard, housed an indoor roller skating rink but was demolished in April 2007; the lot is now vacant except for the groundwater treatment plant constructed by OPOG. The Medlin & Son facility (former Cal-Air facility), located at 12484 Whittier Boulevard, is operated as a machine shop (such as screw machines, lathes and mills, tapping and threading, saw cutting, and welding). The Terra Pave, Inc. facility, located at 12511 East Putnam Street, includes an office building and open areas used for temporary storage of asphalt paving materials for various job sites. Terra Pave also utilizes the property to park and maintain a variety of support vehicles and heavy-duty paving equipment. LA Carts is located at 12549 East Washington Boulevard, a short distance south of Skateland. LA Carts manufactures portable food carts, most of which are fabricated from stainless steel sheeting. Oncology Care is located at 12535 E. Washington Boulevard, at the northeast corner of Putnam Street and Washington Boulevard. Oncology Care is housed in a 3,720 square foot, U-shaped, one-level building, with an exterior paved parking lot. The building has a reception/waiting area in the front, with offices, examination rooms, a medicine storage/mixing room, and treatment room occupying the remainder of the building. The Bishop Company is located at 12519 E. Putnam Street, south-southwest of the former Omega property. The Bishop Company is a wholesale distributor of arborist and landscaping tools and equipment. Nearby residential land use occurs across Whittier Boulevard to the northeast (upgradient); these residences are located approximately 250 feet from the former Omega property, outside of the boundaries of OU-1. residential areas are located beyond the commercial development south of Washington Boulevard. The zoning of the properties within OU-1, pursuant to the Whittier Boulevard Specific Plan-Workplace District allows for business offices, medical and dental offices, live/work units, multi-unit residential development, educational institutions, and also for commercial and light manufacturing. Sensitive commercial land uses could occur on the property in the future based on the Specific Plan's designation of land uses, as well as current use of properties within OU-1. For example, patients undergoing chemotherapy or radiology at the existing Oncology Clinic are likely to have suppressed immune systems. As such, they are a potentially sensitive population that may be more affected by exposure to chemicals than the average healthy person. Other nearby medical facilities include the Kaiser Permanente clinic located at 12470 Whittier Boulevard and Presbyterian Medical Hospital located at 12401 Washington Boulevard (about 300 feet and less than 0.5 mile from the former Omega property, respectively). The former Omega property may be developed for similar, sensitive commercial land use in the future. The nearest water supply well, 02S/11W30-R3, also known as SFS No. 1, is located 1.3 miles west-southwest from the Omega facility. The top of the screen interval of SFS No. 1 is at 200 feet below ground surface, near the maximum depth of the contaminant plume originating at the Omega Site. Trichloroethene (TCE), chloroform, and tetrachloroethene (PCE) have been found in the water produced by this well, and the City of Santa Fe Springs has a wellhead treatment unit utilizing granular activated carbon on this water supply well. The shallow aquifer in the vicinity of the Omega facility correlates with the Gaspar and Gage aquifers, which likely merge in this area. Currently, groundwater underlying OU-1 is not used for any purpose other than sampling, as part of the cleanup of OU-1 and the Omega Site generally. Use for potable purposes within this area is also unlikely for the future due to the presence of high concentrations of total dissolved solids (TDS). Concentrations of TDS in groundwater samples from 2004 to 2006 ranged from 630 to 1,700 milligrams per liter (mg/L). The EPA secondary standard for TDS in drinking water is 500 mg/L while the California EPA (Cal-EPA) maximum contaminant level (MCL) for TDS in drinking water ranges from 500 mg/L (recommended) to 1,000 mg/L (upper) with a short-term limit of 1,500 mg/L. Risks from contaminated groundwater could theoretically result from volatilization of groundwater contaminants into ambient and indoor air. No surface water bodies exist within OU-1. A ROD addressing OU-1 was completed in September 2008.

**Environmental Interest/Information System**

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities,

and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Chlorinated solvents have impacted the subsurface as a result of operations at the Site, including the use of a solvent degreaser. Tetrachloroethene (PCE) and trichloroethene (TCE) have been detected in soil at concentrations of up to 7,514 micrograms per kilogram (ug/Kg) and 4,759 ug/Kg, respectively. PCE was detected in soil gas at a maximum concentration of 41,300 micrograms per liter (ug/L). Groundwater has also been impacted by releases of chlorinated solvents at the Site.

**CA WDS:**

Facility ID: 4 19I000552  
Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)  
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.  
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board  
Subregion: 4  
Facility Telephone: 2139448808

Primary Waste: Stormwater Runoff  
Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils, rubble and concrete are examples of this category.  
Secondary Waste: Not reported  
Secondary Waste Type: Not reported  
Design Flow: 0  
Baseline Flow: 0  
Reclamation: No reclamation requirements associated with this facility.  
POTW: The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.  
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

**Environmental Interest/Information System**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Hazardous Waste Summary:**

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003  
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BE WASTE GUNPOWDER.

Waste code: D007  
Waste name: CHROMIUM

Waste code: D008  
Waste name: LEAD

Waste code: D035  
Waste name: METHYL ETHYL KETONE

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

**Environmental Interest/Information System**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: 181  
Waste name: 181

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Description: Appears that some valves in the control room were turned on and caused sulfuric acid to be released into the water treatment area. All acid was contained in the holding tanks , however, it appears that some acid went into the urinals and may have been released into the public sewage system. This may have occurred during the weekend and was discovered this date.

**Environmental Interest/Information System**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

File Location: Regional Board  
Potential Media Affected: Aquifer used for drinking water supply, Soil  
Potential Contaminants of Concern: Benzene, Tetrachloroethylene (PCE), Toluene, Trichloroethylene (TCE), Xylene  
Site History: A natural gas processing plant was located within the southwest portion of the study area and was demolished around 1960 when the area was commercially redeveloped. Environmental assessment and remediation activities, focusing on the former natural gas processing plant were overseen by the County of Los Angeles initially, then later by the City of Santa Fe Springs (SFS) beginning in 2000. By mutual agreement, the SFS had a lead oversight role for the purpose of soil cleanup and closure while the Regional Water Quality Control Board (Regional Board) oversaw site activities with regard to groundwater protection. Four entities agreed in 2002 to participate in a consortium to address environmental issues in what came to be called the Mini-Regional Study Area in the City of Santa Fe Springs. The entities are: the City of Santa Fe Springs (Little Lake Village senior housing project, Consolidated Graphics, Kimmerle Brothers, Inc., and Bemshaw Group (Western Allied Property). The Study Area is bound to the west by Fulton Wells Road, to the east by Koontz Avenue, to the north by Florence Avenue, and extending 610 to 1,240 feet southward from Florence toward Lakeland Road as shown on the attached Figure. Site assessment Soil borings were advanced in February 1988, after it was determined that elevated levels of hydrocarbons were present (currently this comprised the northern half of LLV) based on a soil vapor survey conducted on the John Alexander & Associates property in December 1987/January 1988. The County of Los Angeles Fire Department and Department of Health Services, oversaw site investigation and remediation activities until 2000. As part of the acquisition of the LLV property, the City of Santa Fe Springs (SFS) retained Alaska Petroleum Environmental Engineering, Inc. (Alaska Petroleum) to perform a Phase I Environmental Site Assessment, Phase II Site Characterization ( Phase II ), a methane gas survey, and oversee a Human Health Risk Assessment ( HHRA ), and a hydrocarbon fate-and-transport ( FAT ) study. The latter two reports were prepared by Enviro-Tox Services, Inc. using Phase II analytical data collected by Alaska Petroleum. The June 2002 HHRA and FAT reports determined that: 1) The installation of subsurface passive venting and/or vapor barriers could result in the reduction of estimated cancer risks to levels below the one-in-a-million cancer health risk, and 2) It will take between 78 and 1,000 years for the petroleum hydrocarbon constituents to reach groundwater, and due to the soil moisture the concentrations, would either most likely fall below current USEPA MCLs and drinking water standards or not reach groundwater at all. The SFS Fire Department reviewed the draft HRA to determine if there would be any requirements pertaining to further investigation, future monitoring or proposed mitigating measures that applied to the City property development. City Fire concluded that no further action was required at this time other than the installation of a subsurface, passive methane venting system (e.g., a vapor barrier) under all residential buildings. However, City Fire also

stated that this does not preclude any other requirements imposed by other regulatory agencies such as the Regional Water Board. SFS had no further requirements for the Little Lake Village housing project but continued assessment was required on three adjacent properties (Consolidated Graphics, Kimmerle Brothers and Western Allied) in order to delineate hydrocarbons in the subsurface. Alaska Petroleum subsequently submitted a Phase II workplan for the Mini-Regional study area in January 2004. Site investigation continued through September 2005. The final Mini-Regional Study report was submitted in May 2006. In 2007, soil vapor surveys were implemented on the three remaining properties, after which Consolidated Graphics and Kimmerle Brothers were granted a NFA (soil only) by the City of Santa Fe Sprin

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

Not reported

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information

from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

US Facility Response Plan (FRP) contains plans for responding, to the maximum extent practical, to worst case discharges of oil.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Background Info: The Walker Properties site was used by Getty Oil Company for the handling and storage of hydrocarbon products, during which time drilling fluids were disposed in onsite sumps. Lakewood Oil Service, Inc. used the northwestern portion of the property to store used crankcase oil and waste diesel fuel in tanks until it could be sold to a recycler. During the past, oil containing polychlorinated biphenyls (PCBs) and lead were disposed of in the area adjacent to Lakewood Oil's tanks. An underground tank was removed from this area in April 1990. However, soils

with extensive PCB and heavy metal contamination remain. A hydrocarbon liquid, suspected to be JP-5 jet fuel, was stored on the southwest corner of the property. Soils in this area contain elevated levels of volatile contaminants. The pathways of concern are inhalation, soil ingestion, dermal contact and groundwater ingestion. The remaining area of the property has soil contaminated with petroleum hydrocarbons and some material containing asbestos. The RI/FS was approved in 1996. Only the PCB contamination in the Lakewood Section presented an unacceptable risk. A RAP approved in 1997 chose capping the PCB area as the remedial alternative. Cap installed. Site certified in 1998. There is a deed restriction in place and an operation and maintenance (O & M) for the asphalt/concrete cap. DTSC recovered \$11,000 in past costs from BC partners. The site was redeveloped in 2003.

Completed Date: 1997-06-13 00:00:00  
Comments: The Walker Properties site was used by the Getty Oil Company for the handling and storage of hydrocarbon products. Lakewood Oil Service Inc. used the northwestern portion (Parcel 3) to store used crankcase oil and waste diesel fuel in tanks until it could be sold to a recycler. A hydrocarbon liquid was stored on Parcel 2 and is suspected to be JP-5 jet fuel. Parcel 1 has soil contaminated with petroleum hydrocarbons and some asbestos-containing materials.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Removal Action Completion Report  
Completed Date: 1996-01-09 00:00:00  
Comments: A Removal Action was conducted at the Walker Property site on December 5th and 6th, 1995. The soil of the 21 acre site is contaminated with PCBs, lead, waste oil, and diesel fuel. Weeds had overgrown the site and were causing a fire hazard. A fire on a site contaminated with PCB's has the potential to release highly toxic dioxins and furans into the atmosphere. The weeds were cut down and removed from the property by a licensed property by a licensed contractor.

Completed Document Type: Preliminary Endangerment Assessment Workplan  
Completed Date: 2007-06-26 00:00:00  
Comments: The approved workplan outlines the proposed collection of additional  
soil, soil gas, and groundwater samples to fill site characterization  
data gaps identified during an October 4, 2006 meeting and a November  
16, 2007 conference call. The tasks included the installation and  
sampling of multidepth soil gas probes for VOC analysis, soil  
sampling for VOC's, SVOC's, and metals analysis, and the installation  
and sampling of groundwater monitoring wells for VOC's and SVOC's  
analysis.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

### **DELISTED NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## ***Federal CERCLIS list***

### **CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System**

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site List***

### **CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned**

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

### ***Federal RCRA non-CORRACTS TSD facilities list***

#### **RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### ***Federal RCRA generators list***

#### **RCRA-LQG: RCRA - Large Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

## ***State- and tribal - equivalent CERCLIS***

### **ENVIROSTOR: EnviroStor Database**

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

### ADDITIONAL ENVIRONMENTAL RECORDS

#### **Local Brownfield lists**

##### US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

### ***Local Lists of Hazardous waste / Contaminated Sites***

#### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### EDR PROPRIETARY RECORDS

#### ***EDR Proprietary Records***

#### Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

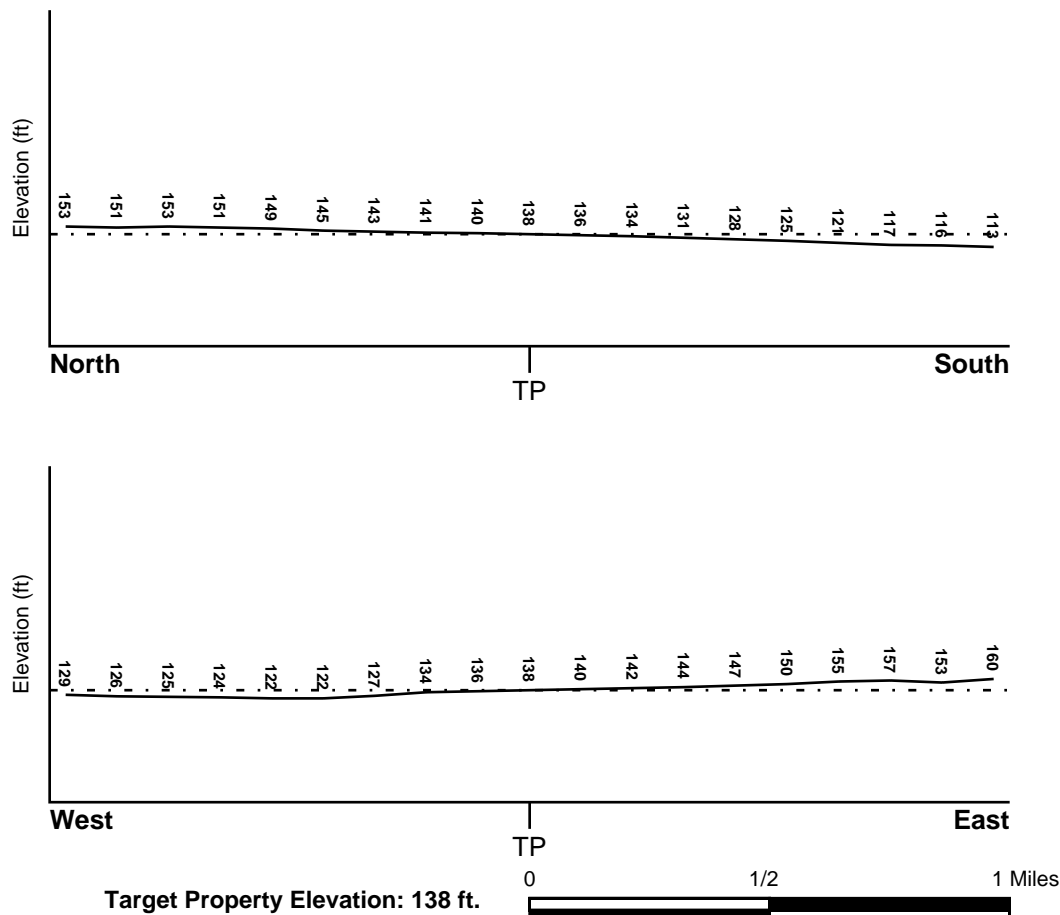

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### **DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sandy loam  
gravelly - sandy loam  
silt loam  
clay  
fine sand  
gravelly - sand  
sand  
fine sandy loam

Surficial Soil Types: sandy loam

gravelly - fine sandy loam  
silty clay loam  
clay loam

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## **TOPOGRAPHIC INFORMATION**

### **USGS 7.5' Digital Elevation Model (DEM)**

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### **Scanned Digital USGS 7.5' Topographic Map (DRG)**

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## **HYDROLOGIC INFORMATION**

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

## **HYDROGEOLOGIC INFORMATION**

### **AQUIFLOW<sup>R</sup> Information System**

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## **GEOLOGIC INFORMATION**

### **Geologic Age and Rock Stratigraphic Unit**

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### **STATSGO: State Soil Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### **SSURGO: Soil Survey Geographic Database**

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## 2009 Enhancements to EDR City Directory Abstract

New for 2009, the EDR City Directory Abstract has been enhanced with additional information and features. These enhancements will make your city directory research process more efficient, flexible, and insightful than ever before. The enhancements will improve the options for selecting adjoining properties, and will speed up your review of the report.

**City Directory Report.** Three important enhancements have been made to the EDR City Directory Abstract:

1. *Executive Summary.* The report begins with an Executive Summary that lists the sources consulted in the preparation of the report. Where available, a parcel map is also provided within the report, showing the locations of properties researched.
2. *Page Images.* Where available, the actual page source images will be included in the Appendix, so that you can review them for information that may provide additional insight. EDR has copyright permission to include these images.
3. *Findings Listed by Location.* Another useful enhancement is that findings are now grouped by address. This will significantly reduce the time you need to review your abstracts. Findings are provided under each property address, listed in reverse chronological order and referencing the source for each entry.

**Options for Selecting Adjoining Properties.** Ensuring that the right adjoining property addresses are searched is one of the biggest challenges that environmental professionals face when conducting city directory historical research. EDR's new enhancements make it easier for you to meet this challenge. Now, when you place an order for the EDR City Directory Abstract, you have the following choices for determining which addresses should be researched.

1. *You Select Addresses and EDR Selects Addresses.* Use the "Add Another Address" feature to specify the addresses you want researched. Your selections will be supplemented by addresses selected by EDR researchers using our established research methods. Where available, a digital map will be shown, indicating property lines overlaid on a color aerial photo and their corresponding addresses. Simply use the address list below the map to check off which properties shown on the map you want to include. You may also select other addresses using the "Add Another Address" feature at the bottom of the list.
2. *EDR Selects Addresses.* Choose this method if you want EDR's researchers to select the addresses to be researched for you, using our established research methods.
3. *You Select Addresses.* Use this method for research based solely on the addresses you select or enter into the system.
4. *Hold City Directory Research Option.* If you choose to select your own adjoining addresses, you may pause production of your EDR City Directory Abstract report until you have had a chance to look at your other EDR reports and sources. Sources for property addresses include: your Certified Sanborn Map Report may show you the location of property addresses; the new EDR Property Tax Map Report may show the location of property addresses; and your field research can supplement these sources with additional address information. To use this capability, simply click "Hold City Directory research" box under "Other Options" at the bottom of the page. Once you have determined what addresses you want researched, go to your EDR Order Status page, select the EDR City Directory Abstract, and enter the addresses and submit for production.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2006. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

**PERCHLOROETHYLENE (PCE) AND HEAVY METALS IN SOIL AT THE JALK LEASE**

Dear Mr. Walker,

McLaren/Hart has completed our review of the site characterization report prepared by Levine/Fricke ("Draft Subsurface Soil Investigation, Jalk Fee Property, 10607 Norwalk Boulevard, Santa Fe Springs, California"). The report included data showing that the soil contains crude oil, which would be expected in an active oil field. The report also documented that the soil contains lead, which presumably leached from metal pipes in an area known as the "boneyard", and perchloroethylene (PCE), which we believe is a result of operations at the neighboring facility.

This letter briefly explains the significance of the findings which were presented in the Levine and Fricke report and makes recommendations on how Mobil should proceed.

**HEAVY METALS**

Total lead, mercury, and zinc were detected in the boneyard in the southwest corner of the property at maximum concentrations of 1,750, 34.1, and 10,000 milligrams per kilogram (mg/kg), respectively. These concentrations exceed the Total Threshold Limit Concentration (TTLC) of 1,000, 20, and 5,000 mg/kg. Soluble lead and zinc were also detected at maximum concentrations of 151 and 474 milligrams per liter (mg/l). These concentrations exceed the Soluble Threshold Limit Concentration (STLC) of 5 and 250, respectively. Samples exceeding the TTLC and STLC were found at both the three foot and the eight foot depths. No samples were collected below eight feet.

Although the lead samples were collected from random sample locations, it appears that the lead is confined to the northeast corner of the boneyard, representing approximately one third of the

total surface area of the boneyard, approximately 6,100 square feet. Excavation of this area to a depth of eight feet would result in approximately 1,800 cubic yards of soil.

Since the data show that metal concentrations were increasing between 3 and 8 feet, it is reasonable to assume that the soil below 8 feet may contain metals exceeding the cleanup criteria. We recommend additional sampling below eight feet prior to excavation to define the vertical extent of heavy metals.

#### PERCHLOROETHYLENE (PCE)

Perchloroethylene and related compounds [trichloroethylene (TCE) and 1,2-dichloroethylene (DCE)] were detected in the soil at the Jalk Fee. These chlorinated compounds are used in such industries as dry cleaning, electronics, aerospace, and metal treating, but are not used in oil production. The maximum concentration of PCE in soil at the Jalk Fee is 2,500,000 parts per billion (ppb). The following sections describe the possible source of PCE at this location.

#### Santa Fe Springs Fire Department Record Review

In an attempt to identify possible sources of the PCE at the Jalk lease, McLaren/Hart reviewed the files at the Environmental Compliance Section of the City of Santa Fe Springs Fire Department. A written request to review the file on Continental Heat Treating was submitted by FAX on Tuesday, May 11, 1993 and the file was reviewed on Wednesday, May 12th. The following is a summary of the information in the file relevant to the PCE on the Jalk lease.

#### Use of PCE at Continental Heat Treating

The Continental Heat Treating facility was designed in 1968 and began operation in 1969. The facility drawings (Job # 6802, PE-1) dated August 20, 1968 showed a degreaser located approximately 120 feet west of the northeast corner of the building and 30 feet south of the northern wall of the building. A pipe trench was shown going from the degreaser to the north end of the building, just west of the electrical panel. The PCE on the Jalk lease was found in the area beginning exactly where the pipe trench left the building and continuing west to the northwest corner of the building. (See Figure 1)

In a letter to the City of Santa Fe Springs dated March 30, 1987, Continental Heat Treating reported that PCE was "used for cleaning of parts prior to heat treating." The hazardous material registration forms (February 15, 1993) reported an average PCE use of 125 gallons per day and a maximum daily use of 250 gallons per day. The Business Plan described a 500 gallon above ground PCE tank, although the location of this tank could not be determined from the information in the file.

#### Documented Annual PCE Waste Generation

The hazardous materials registration forms (February 15, 1993) reported that 1.5 tons of PCE are generated each year at the facility. In the March 30, 1987 letter to the City of Santa Fe Springs, Continental Heat Treating reported that the PCE was stored in a tank provided by Acto Kleen Corporation and was disposed by Acto Kleen for recycling.

#### Hazardous Waste Code Violations

Continental Heat Treating has operated under an Industrial Waste Permit from the Los Angeles County Sanitation District and predecessor agencies since the 1970's. Permit # 4365 was issued on January 27, 1970 and Permit #4827 was issued on November 18, 1976. These permits did not include limits or sampling requirements for PCE.

Various inspections, violations, and complaints over the years were included in the file. These included:

- ▶ A Notice was issued on July 11, 1978 from the LA County Engineer ordering Continental Heat Treating to "clean the interceptor by July 18, 1978" and "maintain the interceptor in good operating condition at all times."
- ▶ An inspection report of April 5, 1982 noted under "Special Hazards and Conditions" that a degreaser was present in the northeast portion of the building.
- ▶ A complaint to the Fire Department was recorded on October 5, 1987 that blue-green water was being discharged to the street. This was attributed to the recent earthquake (October 4, 1987) which had broken several pieces of equipment at the site and that "a discharge similar to that of December 8, 1986 was occurring."
- ▶ A Notice of Violation (NOV) was issued on February 23, 1988 for discharging cooling tower blow down water to the street.
- ▶ The Santa Fe Springs Fire Department cited Continental Heat Treating on June 14, 1988 for failure to disclose certain materials on the 1987 plot plan.

#### Possible Explanations

Illegal and accidental discharges of chlorinated solvents to soil are typically not reported and are not discovered until a site characterization is performed. The data from the Levine/Fricke report

STAFF:TERRELL/135.LTB

showing PCE in the soil, the use of large quantities of PCE on the adjoining site, the location of the PCE in soil relative to the degreaser and pipe trench on the Continental facility, and the complete absence of any use of chlorinated solvents of any kind by Mobil E & P, very strongly points to Continental Heat Treating as the source of the PCE on the Jalk Fee.

The following possible explanations are based on the information we were able to find and on past experience with similar situations. We cannot say which of these explanations is most likely or whether there is another possible explanation for the observed PCE.

*Intentional or Unintentional Discharge.* One possible explanation is that PCE from the degreaser or from the above ground storage tank was discharged to the ground by an employee or contractor working on site. This could have resulted from any number of activities such as overflow, spillage, a broken pipe, or an intentional discharge of waste PCE.

*Fires.* Three degreaser fires were reported in the Continental Heat Treating file at the Santa Fe Springs Fire Department:

- ▶ Degreaser Tank Fire (Code 6205) 87/10/02;
- ▶ Fire in Degreaser (Code 6225) 88/04/09;
- ▶ Fire in Degreaser (Code 6229) 88/08/01.

*Earthquake.* The file made reference to two earthquakes (December 8, 1986 and October 4, 1987) that resulted in broken equipment and discharge of chemicals. Although these references were made to the cooling tower blowdown water, it is also possible that the piping between the degreaser and the PCE storage tank were among the "several pieces of equipment" that were damaged at the same time.

I would be happy to discuss this matter with you at any time. Please call me at (714) 752-3211 if you have any questions or requests for additional information.

Sincerely,

Dennis Dineen
